Discover  
the potential

Established in 1993 with the principles of offering unique design concepts, a high-level service approach, and price advantages in quality and compatible product segments. The company is committed to customer satisfaction through product quality, production, sales, assembly, and after-sales services. Currently operates a 5,000 m<sup>2</sup> production facility in Istanbul, Türkiye, employing nearly 100 staff members. With approximately 32 years of experience, Botech has become one of Turkey's leading manufacturers with substantial OEM production capacity. The company distributes its products across all 81 provinces in Türkiye and maintains an active presence in international markets.

**TELECOMMUNICATION SATELLITE  
AND ELECTRONIC INDUSTRIALISTS  
BUSINESS PEOPLE ASSOCIATION**

**Hayrettin ÖZAYDIN**  
**Chairman of TUYAD**

TUYAD (Telecommunications Satellite and Electronic Industrialists Business People Association) is a non-profit non-governmental organization founded in Istanbul in 2001 by companies operating in the satellite TV sector.

The association includes Turkey's leading satellite operators, TV platforms, satellite receiver manufacturers, infrastructure equipment producers, and service providers.

TUYAD's main goal is to contribute to the development of the satellite and broadcasting sector in Turkey, to encourage sectoral cooperation, and to strengthen information sharing among its member companies.

Believing in the importance of effective use of satellites in integrated systems alongside other evolving communication solutions, the association carries out technical and regulatory work in this field.

The association offers various services to its members free of charge and, through its events, establishes direct contact with public institutions to convey members' industry-related demands and concerns to the relevant authorities.

As of 2022, TUYAD represents 52 member companies and has contributed to exports totaling approximately \$ 17 billion in the same year. With its strong representation in the industry and technical expertise, TUYAD's opinions and reports are frequently referenced in circulars and practices prepared by regulatory bodies.

TUYAD also plays an active role on the international stage as the Turkey partner of the Global VSAT Forum (GVF).

Aiming to promote women's employment, TUYAD organizes various meetings for women working in the sector and engages in discussions with female executives on industry and social issues.

Satellite TV systems, which first introduced high-definition (HD) broadcasts to end-users and are now preparing to pioneer QFHD broadcasts, play a strategic role not only in broadcasting but also in global communication. Bearing the responsibility of being the common voice of such a vital industry, TUYAD represents its members and the sector at both national and international levels.
